

Problem Statement # 1

Urban neighbourhoods are a result of the residents NOT owning the process of envisioning/designing/retrofitting their own locality.

Problem Statement # 2

Urban residents have no way of “seeing/knowing/measuring” the impact of their cumulative individual actions & inactions on the neighbourhood/collective

Solution Thesis # 1

Urban neighbourhoods can be transformed if residents OWNED the process of envisioning/planning them.

Solution Thesis # 2

Urban residents are more likely to take individual actions if they are enabled to see/know/measure the impact of their cumulative individual actions/inactions
